

GOODBYE CORROSION

Hello Biodec-C

Industrial and coastal municipal wastewater treatment plants face corrosive environments. Employing SBR technology is now commonplace but decanters, a critical component in SBR's, are usually made of stainless steel.

No more.

Build in composite, the BIODEC-C™ decanters are totally corrosion resistant. At the heart of the C series is our submerged weir construction that provides nearly constant discharge flow rates. Algorithm driven intelligent decanting cycles can be tailored to suit changing process conditions.
